The Resin Mill Ltd guarantee when using our ResinBound Pro UVR light-stable resin, the polyurethane resin will retain its original colour throughout its lifetime.

The Resin MB's solvent free aliphatic polyurethane resin has been specially formulated for creating a light stable resin bound system. Unlike other resins on the market, The Resin MB can guarantee colour stability when using the UVB Pro product.

Unlike aromatic polyurethane resins, which will discolor, The Floor-Mil's strong, aliphatic polyurethane resin is completely colour stable. It will not change colour and turn yellow/brown, as an aromatic resin or an inferior aliphatic resin would. This is because The Floor-Mil's ResinGuard UVR-P is so refined and manufactured with the best, A grade raw materials

## RESIN DRIVEWAYS THAT TRANSFORM YOUR HOME

Our resin driveways are the perfect blend of style, durability and practicality, designed to enhance the look and functionality of your home. Using high-quality, UV-stable materials, we create stunning driveways that maintain their vibrant colour and flawless finish for years to come.

With over 150 colours and finishes to choose from, you can customise your driveway to perfectly complement your property. Fully permeable and SuDS compliant, our resin surfaces allow water to drain naturally, reducing surface runoff and the risk of flooding.

At Just Driveways, our skilled team ensures every installation is carried out with precision and care. From preparation to the final touches, we deliver a smooth, seamless finish that is both low-maintenance and built to last. Whether you're upgrading an existing driveway or starting fresh, trust us to provide a surface that's as beautiful as it is durable.

# A blend of natural aggregates and a specifically made transparent resin is used to generate resin bonded surfaces.

When cured, this mixture is porous, enabling water to pass through without pooling or flooding, while also being sturdy enough to withstand breaking. After the mixture has been made, it is smoothed out and applied to the prepared base at a thickness of around 20mm. The ultimate result is a long-lasting, low-maintenance surface that is non-slip, appealing in appearance, and far more environmentally friendly than other surfacing options.
